

DAVID G. VICTOR

Co-Director, UC San Diego Deep Decarbonization Initiative

**Professor of Innovation and Public Policy
The School of Global Policy and Strategy, UC San Diego**

**Professor of Climate, Atmospheric Science and Physical Oceanography
The Scripps Institution of Oceanography (adjunct faculty)**

**Professor, Department of Mechanical & Aerospace Engineering
The Jacobs School of Engineering, UC San Diego (affiliated)**

UC San Diego, 9500 Gilman Drive #0519, La Jolla, CA 92093-0519
Tel: 1.858.534.3254 | Fax: 1.858.534.3939 | Email: david.victor@ucsd.edu
Revision: February 2023

EDUCATION

1997 Ph.D. (Political Science), MIT
1987 A.B. (History and Science), Harvard University

EXPERIENCE

2009 - present **Professor of Innovation and Public Policy, the School of Global Policy and Strategy (GPS), UC San Diego.**
At GPS I develop and teach courses on the politics of the policy making process as well as advanced courses on the politics of energy and environmental policy and fundamentals of energy systems (joint with Mechanical and Aerospace Engineering). I designed the school's Master in Public Policy (MPP), which is rapidly growing to become the largest degree program, and co-lead the school's specialization on environmental policy. I also co-designed and created courses that link GPS (where most teaching is in the social sciences) with the Scripps Institution of Oceanography with the Jacobs School of Engineering. Also co-lead the capstone program on energy and environmental policy, which links advanced students with real world clients for strategic analysis and consulting experience—the culmination of their two-year careers at GPS. Since 2018 holder of the Center for Global Transformation endowed chair in innovation and public policy.

- 2017 - present **Co-director, UCSD Initiative on Deep Decarbonization**
 Joint effort by UCSD’s policy school (GPS) and the School of Engineering to catalyze more research and teaching related to radical reductions in emissions of warming gases “in the real world”—that is, where political and economic constraints matter. Lead a seminar series; fund creation of new courses; and spearhead major integrated research initiatives—on the future of natural gas, on the prospects for advanced nuclear plants, on the politics of carbon capture & storage, decentralization of the grid, and the prospects for integrating massive renewables into the grid.
- 2022-present **Director, The Scripps Institution of Oceanography, Carbon Removal Initiative (CRI)**
 The Carbon Removal Initiative (CRI) is a new research enterprise at the Scripps Institution of Oceanography (SIO), based in Climate, Atmospheric Science and Physical Oceanography. It will analyze the potentials for slowing and stopping climate change through, in part, massive deployment of atmospheric carbon removal technologies. The CRI will fund and perform research on particular carbon removal options but focus on systems analysis on the modes and speed at which carbon removal systems might scale and their overall impact on carbon dioxide concentrations in the atmosphere.
- 2017-present **Professor, Mechanical and Aerospace Engineering.**
 At the Jacobs School of Engineering, I advise PhD students studying electric power grids—stability, integration of renewable power generators on grids, behavior and operation of microgrids. Also member of the Center for Energy Research, on “Organized Research Unit” of UC San Diego managed by Mechanical and Aerospace Engineering.
- 2017-present **Professor of Climate, Atmospheric Science, and Physical Oceanography (adjunct)**
 At the Scripps Institution of Oceanography, I lead efforts to understand the policy and geophysical responses to rapid climate change, including potential roles for emergency deployment of carbon removal technologies.
- 2016-present **Nonresident Senior Fellow, The Brookings Institution**
 Co-created a Brookings-wide initiative that integrates insights from across all the major arms of Brookings, anchored in Foreign Policy. Create new content on how shifting geopolitics and technology affect the ability of countries to manage emissions of warming gases and lead public and private events on the same. Founded and led the Brookings initiative on the financial markets and climate change.

- 2009-2021 **Director, Laboratory on International Law and Regulation (ILAR) at the School of Global Policy and Strategy, UC San Diego**
 ILAR examined the ways that international regulatory institutions affect behavior—looking across a wide array of issue areas from energy and environment to human rights, trade, and security. Most of ILAR’s research concentrated in two areas—on the strategies that firms use to influence international legal agreements and on experimental research on the design and implementation of international agreements.
- 2006 - 2009 **Professor of Law, Stanford Law School.**
 Taught courses in regulated industries, energy and environmental law as well as field seminars and supervised JD research projects.
- 2001 - 2009 **Director, Program on Energy and Sustainable Development (PESD), Stanford University.**
 Responsible for raising more than \$15m and managing the Program’s \$2.3m per year annual budget. Senior Fellow, Freeman Spogli International Studies. Led PESD research on a wide range of issues in energy markets, with a special focus on the emerging markets of Brazil, China, India, Mexico and South Africa. Studies examined global climate change policy after the Kyoto Protocol; the emerging global markets for coal and natural gas; energy services for the world’s poor; and the performance of state-controlled oil companies.
- 1998 - 2009 **Robert W. Johnson, Jr., Fellow for Science and Technology, Council on Foreign Relations, New York (Adjunct Senior Fellow 2001-2009).**
 Head of CFR’s Science and Technology program; co-leader (with Benn Steil) of the CFR study on technological innovation and economic growth; Director of CFR’s task force on energy security (co-chaired by James Schlesinger and John Deutch) and senior adviser to the task force on climate change (co-chaired by George Pataki and Tom Vilsack). Led numerous study groups, such as on improving management of the \$50b U.S. strategic petroleum reserve and on international regulation of geoengineering.
- 1997 - 1998 **Research Scholar, Project on "Environmentally Compatible Energy Strategies, International Institute for Applied Systems Analysis (IIASA), Laxenburg, Austria**

- 1993 - 1997 **Co-Leader, Project on "Implementation and Effectiveness of International Environmental Commitments (IEC)", IIASA, Laxenburg, Austria**
- 1990 – present **Consultant and Policy Adviser**
Various organizations, including: BP, plc, City of San Diego, Brookings Institution, Chevron, Council on Foreign Relations, Duke Energy, Electric Power Research Institute, Entergy, Nextera (and Florida Power & Light), Honda Motor Co Ltd, METI, International Institute for Sustainable Development, New Zealand Ministry for the Environment, Organization for Economic Cooperation and Development, Norwegian Ministry of Foreign Affairs, San Diego Gas & Electric, United Nations Conference on Trade and Development, United Nations Department of Economic and Social Affairs, United Nations Framework Convention on Climate Change, US Information Agency, U.S. Environmental Protection Agency, and the L20 project of the University of Victoria, World Bank.

TEACHING EXPERIENCE

UC San Diego

- Current “Fundamentals of the Energy System.” Intensive tour of all the major energy sources and carriers, along with major policies and projections. Intended for master and PhD students who will take additional coursework in the area or pursue careers related to energy. Offered jointly with the Jacobs School of engineering.
- “MPP Capstone” A project-based course emphasizing real world application of theories and methods of policy analysis to strategic challenges faced by real-world clients. Students work in small teams an external client to understand the challenge posed by the client while developing analytical tools for understanding the economic, technological, and policy aspects of the question—and then apply those tools, leading to final presentations and reports suitable for senior management and governing boards. Recent projects addressed the impact of emerging technologies on a utility’s revenue model, quantified opportunities for an EV company to capture credits under a new state program and how a state regulatory agency can encourage greater investment in microgrids.
- “Policy Making Processes.” First year professional master-level course that introduces students to major theories of how policy is made in different systems of government, incentives for policy reform, impact of policy on state- and privately-held firms, administrative law, organizational behavior, the behavior of

groups, principal-agent theory, etc.

“Politics of Energy and Environmental Policy.” An intensive professional-level seminar course on the theories that explain policy behavior related to energy and the environment. In-depth treatment of state-owned enterprises and national oil companies; role of the state in regulating private behavior; international governance; organizational and bureaucratic behavior. Theories coupled with several dozen case studies drawn from around the world.

- 2015 “Interdisciplinary Approaches to Studying Energy.” Seminar series jointly taught with Jacobs School of Engineering, Department of Biology, and other units on campus. Offered once and turned into a Google MOOC.
- 2012 “The Science and Politics of Climate Change.” Course jointly taught with three professors from the Scripps Institution of Oceanography on the fundamental scientific elements of climate change, economic analysis of climate policies, and political analysis. (Filmed for a Coursera MOOC, offered multiple times starting January 2014; re-filmed for a UC-wide 10 campus course that began fall 2017).
- 2011 “International Organization.” An intensive field seminar for PhD students, Department of Political Science, UC San Diego
- 2010 – 2013 “International Law and Regulation.” Professional level master’s student course with introduction to major theories of international cooperation, the role of public international law, global governance.

Stanford University

- 2003 – 2007 “Energy Law.” (Stanford Law School Law 455.) In-depth analysis of major issues in regulation of the energy system. Topics include all major aspects of U.S. oil & gas law, electricity law, and comparison with other countries. Includes assessment of experience with private investment in competitive markets as well as the performance of state-owned corporations. JD students.
- 2008 – 2009 “Political Economy of Energy Policy.” (Stanford Law School Law 227; cross-listed as Earth Systems 205.) An in-depth look at the major theories of political economy—such as public choice, principal-agent, organizations, and international political economy—with applications to major issues in energy policy. Core class for the “natural resources” track of Stanford’s advanced degree in public policy. JD and graduate students.
- 2005 – 2008 “Regulated Industries.” (Stanford Law School Law 220.) A survey on how the state intervenes to address major failures—mainly situations of natural monopoly and externality. Includes an introduction to the major theories of market failure,

attention to how regulators address problems of asymmetrical information and federalism, and application to central cases in electricity, natural gas, telecommunications, environment (principally air pollution) and food/drug law. JD students.

- 2007 “The Political Economy of Energy in India” (Earth Systems 288/188.) Intensive lecture course at Stanford followed by two weeks of field visits in India. Undergraduate and graduate students.
- 2005 “Energy and Development in the Brazilian Amazon” (Public Policy 30P). Three-week field seminar in Brazil, mainly the Amazon region. Undergraduate and graduate students.
- 2003 “International Environmental Politics.” (Political Science 118S). Survey of major theories and cases related to international management of environmental problems. Undergraduate students.
